APPENDIX C
Safety Requirements

Any applicants with projects involving environmental, health or safety issues, such as:

- the use of hazardous materials including nanomaterials
- use of hazardous machinery or equipment
- potential exposure to disease-carrying animals
- any other activities that might represent a risk to life or safety, including field work

will be required to obtain Marilyn Cameron’s approval. Marilyn is an ex-officio member of the URP Committee and will review all submitted proposals. All successful applicants whose project involves any of the safety issues listed above must attend Safety Training provided either by Marilyn or by the mentor.

Each mentor is required to submit the checklist on the following page to indicate if safety training is required for the project and who will provide the training. The training must be completed prior to students working in the lab, shop or in the field and is for the student's protection. ALL training must be documented and submitted to the Environmental Health & Safety Office.

Marilyn Cameron is the Director of Environmental Health and Safety and she can be reached at 496-4463, mcameron@mtech.edu, CBB 003.
Training Checklist

☐ I certify that the project outlined in this application does not involve any safety, health or environmental concerns and is exempt from safety training.

☐ I certify that the project outlined in this application will require safety training that will be provided by the mentor. All documentation for this training will be submitted to the Environmental Health and Safety Office (EH&S) as soon as it is completed. I understand that the student(s) will not be allowed to begin their project until this training requirement is met. I will document and submit the following information to EH&S:

Student(s) name:

Date of training:

Topics Covered:

Training provided by:

☐ I certify that the project outlined in this application will require safety training and am requesting the training be provided by the Environmental Health and Safety Office. I understand that the student(s) will not be allowed to begin their project until this training is complete and that I will be notified when the safety training requirement has been met.
