

SUNSHINE TRAVELING TROPHY

Annual Intercollegiate Mining & Mucking Competition

Sunshine Mining Company is pleased to establish a traveling trophy for this annual student competition in support of the established mining education programs in the United States. We believe these programs are essential to the mining industry; the traveling trophy is intended to stimulate interest in mining and related technical training.

We have selected as a trophy symbolic of the industry, a sculpture depicting a mining engineer fully equipped for underground duty. The engineer is standing on a ladder, holding a Brunton compass in his right hand. The statue rests on a base of special wood, Apitong, imported from Malaysia and used for fabricating shaft guides. This wood was selected to complement the engineer, since both the individual and the material "guide" the industry.

The trophy was designed and constructed by Mr. Ken Lonn, a Sunshine supervisor and experienced hard-rock miner. As you will see, Mr. Lonn has combined unique craftsmanship with special artistic ability to create a one-of-a-kind treasure.

We are asking that the participating schools observe some rather simple procedures:

- 1) Actual title and ownership of the trophy will remain with Sunshine Mining Company, and we ask that it be returned if the annual mining contests are ever terminated.

- 2) The winning team in the 1981 competition will be presented the trophy on behalf of Sunshine Mining Company. The presentation will be made by Mr. Lonn's daughter, Mrs. Laura Nall, as representing Sunshine. The trophy will be equipped with a brass plate for engraving the year as well as names of the winning school and team members. We ask that the winning team in each subsequent year be responsible for engraving and mounting a similar brass plate.
- 3) We also ask that, after each contest, the winning team provide Sunshine with a brief outline of the results of the contest, members of the winning team, identification of participating schools and location of the trophy.
- 4) Each year the winning school, which becomes the host for the next contest, will also be asked to pass on the trophy, on behalf of Sunshine Mining Company, to the winning team at the contest it hosts.

Please enjoy the trophy.

E. V. Howard

→ Father & Daughter (a Montana Tech, Mining Engineering graduate) are now operating Golden Maple Mining Co. At Giltedge (Lewistown) Montana. A gold leaching operation.
